### NEW QUESTION: 4

You have an Exchange Server 2013 organization that contains two servers named EX1 and EX2.

EX1 and EX2 are the members of a database availability group (DAG) named DAG1.

EX1 and EX2 each contain a copy of a mailbox database named DB1. DB1 is configured to retain deleted items for 120 days.

At the end of each month, the mailbox databases on EX1 are backed up to tape. The monthly backups are retained for two years.

A user named User1 has a mailbox in DB1.

User1 discovers that a mailbox folder that contained important email messages was deleted more than six months ago.

You need to recover the deleted mailbox folder without affecting any other users who have mailboxes in DB1.

Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

**A.** Run the New-MailboxRestoreRequestcmdlet.

**B.** Restore DB1 from the tape backup to the database's original location.

**C.** Run the New-MailboxDatabasecmdlet and specify the Recovery parameter.

**D.** Run the New-Mailbox cmdlet and specify the Recovery parameter.

**E.** Restore DB1 from the tape backup to an alternate location.

#### Answer: A,C,E

Explanation:

Recovery Database A recovery database is a special kind of mailbox database that allows you to mount a restored mailbox database and extract data from the restored database as part of a recovery operation. You can use the New-MailboxRestoreRequest cmdlet to extract data from a

recovery database. After extraction, the data can be exported to a folder or merged into an existing mailbox. Recovery databases enable you to recover data from a backup or copy of a database without disturbing user access to current data.

**A New-MailboxRestoreRequest cmdlet** Use the `New-MailboxRestoreRequest` cmdlet to restore a soft-deleted or disconnected mailbox. This cmdlet starts the process of moving content from the soft-deleted mailbox, disabled mailbox, or any mailbox in a recovery database into a connected primary or archive mailbox.

For information about the parameter sets in the Syntax section below, see Syntax.

**EXAMPLE 1** To create a restore request, you must provide the `DisplayName`, `LegacyDN`, or `MailboxGUID` for the softdeleted or disabled mailbox. This example uses the `Get-MailboxStatistics` cmdlet to return the `DisplayName`, `LegacyDN`, `MailboxGUID`, and `DisconnectReason` for all mailboxes on mailbox database `MBD01` that have a disconnect reason of `SoftDeleted` or `Disabled`.

```
Get-MailboxStatistics -Database MBD01 | Where { $_.DisconnectReason -eq "SoftDeleted" -or $_.
```

```
DisconnectReason -eq "Disabled" } | Format-List LegacyDN, DisplayName, MailboxGUID, DisconnectReason
```

This example restores the source mailbox with the `MailboxGUID` `1d20855f-fd54-4681-98e6-e249f7326ddd` on mailbox database `MBD01` to the target mailbox with the alias `Ayla`.

```
New-MailboxRestoreRequest -SourceDatabase "MBD01" -SourceStoreMailbox 1d20855f-fd54-4681-98e6-e249f7326ddd -TargetMailbox Ayla
```

**B**

Use the `New-MailboxDatabase` cmdlet to create a mailbox database object in the database container in Active Directory.

For information about the parameter sets in the Syntax section below, see Syntax.

**EXAMPLE 1**

This example creates the mailbox database `MailboxDatabase01`. This example also specifies where to create the `.edb` database file, which is different than the default location.

```
New-MailboxDatabase -Name "MailboxDatabase01" -EdbFilePath  
D:\DatabaseFiles\MailboxDatabase01.edb
```

The `Recovery` parameter specifies that the new database is designated as a recovery database.

**NOT D**

Need to recover data from a backup or copy of a database without disturbing user access to current data.

Therefore restore to an alternate location.

**NOT E**

No recovery parameter exists for the `New-Mailbox` cmdlet.
