An organization deploys an Office 365 tenant.

User accounts must be synchronized to Office 365 by using the Windows Azure Active Directory Sync tool.

You have the following password policies:

Passwords for the on-premises Active Directory Domain Services (AD DS) user accounts are at least six characters long.

Passwords for Office 365 user accounts are at least eight characters long.

You need to ensure that the user accounts will be synchronized. Which user accounts will be synchronized?

- A. User accounts with a password length of at least 8characters
- B. User accounts with a password length of at least 14 characters
- C. No user accounts
- D. All user accounts

**Answer: D**

## Explanation:

Password Sync is an extension to the directory synchronization implemented by the Directory Sync tool and synchronizes user passwords from your on-premises Active Directory to Azure Active Directory. When password sync is enabled, the password complexity policies configured in the on-premises Active Directory override any complexity policies that are defined in the cloud for synchronized users.
