By using our Sharing-and-Visibility-Designer exam braindumps, you can take part in your targeted exam just after 20 or 30 hours' practice, which is indeed a seeming myth to other exam study materials.

There are three reasons as follows: 1.

### **NEW QUESTION: 1**

You administer a Microsoft SQL Server 2008 R2 instance. The instance has a database named CustomerOrders.

The database is backed up by using the weekly scheduled SQL Server Agent jobs.

The backup schedule is shown in the following table:

A drive fails and the CustomerOrders database goes into suspect mode on Thursday at 17:00 hours.

You need to restore the backup.

What should you do?

- A.** Restore the backups taken on Wednesday, Thursday at 09:00 hours, and Thursday at 18:00 hours.
- B.** Restore the backups taken Wednesday, Friday, and Saturday.
- C.** Restore the backup taken on Wednesday only.
- D.** Restore the backups taken on Wednesday and Thursday at 09:00 hours.
- E.** Restore the backups taken on Wednesday, Thursday, and Friday.
- F.** Restore the backups taken on Sunday and Monday.
- G.** Restore the backup taken on Sunday only.
- H.** Restore the backups taken on Wednesday and Friday.

**Answer: D**

### **NEW QUESTION: 2**

Which of the following is MOST important to consider when handling digital evidence during

the forensics investigation of a cybercrime?

- A. Local regulations
- B. Business strategies
- C. Industry best practices
- D. Global standards

**Answer: A**

### **NEW QUESTION: 3**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Subscription named Sub1.

You have an Azure Storage account named Sa1 in a resource group named RG1.

Users and applications access the blob service and the file service in Sa1 by using several shared access signatures (SASs) and stored access policies.

You discover that unauthorized users accessed both the file service and the blob service.

You need to revoke all access to Sa1.

Solution: You generate new SASs.

Does this meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

Instead you should create a new stored access policy.

To revoke a stored access policy, you can either delete it, or rename it by changing the signed identifier.

Changing the signed identifier breaks the associations between any existing signatures and the stored access policy. Deleting or renaming the stored access policy immediately affects all of the shared access signatures associated with it.
