Explanation:
Distribute list are used to filter routing updates and they are based on access lists. In this case, an access list of 44 was created to deny the route from network 172.16.1.0/24 so this route will not be entered into the routing table of RTA.

But the route from RTW can be entered because it is not filtered by the access list.
A and B are not correct because the distribute list is applied to the inbound direction of interface BRIO so outgoing routing updated will not be filtered.
D is not correct because distribute list just filters routing updates so user traffic from network 172.16.1.0 will not be denied.
