NEW QUESTION: 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You are developing and deploying several ASP.Net web applications to Azure App Service. You plan to save session state information and HTML output. You must use a storage mechanism with the following requirements:

- * Share session state across all ASP.NET web applications
- * Support controlled, concurrent access to the same session state data for multiple readers and a single writer
- * Save full HTTP responses for concurrent requests

You need to store the information.

Proposed Solution: Deploy and configure Azure Cache for Redis. Update the web applications.

Does the solution meet the goal?

A. No

B. Yes

Answer: B

Explanation:

The session state provider for Azure Cache for Redis enables you to share session information between different instances of an ASP.NET web application.

The same connection can be used by multiple concurrent threads.

Redis supports both read and write operations.

The output cache provider for Azure Cache for Redis enables you to save the HTTP responses generated by an ASP.NET web application.

Note: Using the Azure portal, you can also configure the eviction policy of the cache, and control access to the cache by adding users to the roles provided. These roles, which define the operations that members can perform, include Owner, Contributor, and Reader. For example, members of the Owner role have complete control over the cache (including security) and its contents, members of the Contributor role can read and write information in the cache, and members of the Reader role can only retrieve data from the cache.

NEW QUESTION: 2

What type of BCP test uses actual resources to simulate a system crash and validate the plan's effectiveness?

A. Walk-through

B. Paper

C. Parallel

D. Preparedness

Answer: D

Explanation:

Explanation/Reference:

Of the three major types of BCP tests (paper, walk-through, and preparedness), only the preparedness test uses actual resources to simulate a system crash and validate the plan's effectiveness.

NEW QUESTION: 3

You have a simple wpb application that has a single Front Controller servlet that dispatches to JSPs generate a variety of views. Several of these views require further database processing to retrieve the necessary order object using the orderID request parameter. To do this additional processing, you pass the request first to a servlet that is mapped to the URL pattern /WEB-INF/retrieveOrder.do. in the deployment descriptor. This servlet takes two request parameters, the ordered and the jspID and the jspURL. It handles the database calls to retrieve and build the complex order objects and then it dispatches to the jspURL.

Which code snippet in the Front Controller servlet dispatches the request to the order retrieval servlet?

A. String T= "/WEB-INF/retrieveOrder.do?orderID=%d&jspURL=%s";

String url = String.format (T, ordered, jspURL);

= context.getRequestDispatcher (url);

View.forwardRequest (request, response) ;

B. String T= "/WEB-INF/retrieveOrder.do?orderID=%d&jspURL=%s";

String url = String.format (T, ordered, jspURL);

= context.getRequestDispatcher (url);

View.forward (request, response) ;

C. request.setAttribute ("orderID", orderID); request.setAttribute("jspURL", jspURL); =

context.getRequestDispatcher ("/WEB-INF/retrieveOrder.do"); view.forward(request, response)

D. request.setAttribute ("orderID", orderID); request.setAttribute("jspURL", jspURL);

Dispatcher view

= request.getRequestDispatcher (".WEB-INF/retrieveOrder.do");

View.forwardRequest (request, response);

Answer: B

NEW QUESTION: 4

Your patient is a 35-year-old trauma victim who is not breathing. You are unable to open the airway by means of the jaw thrust and suctioning. You should:

A. Ventilate with a bag-valve-mask unit.

B. Use the head-tilt/chin-lift technique.

C. Attempt a mouth-to-mask ventilation.

D. Insert an airway through a tracheostomy.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Although the head-tilt/chin-lift is not ordinarily used on trauma patients because it interferes with spinal immobilization and alignment, opening the airway takes priority over all other considerations. Be sure to document your actions in the patient care report.
