Widerwillig wandte er seinen Blick Mr, [CIS-CPG Zertifizierung](#) Don Quijotes schwierige und kurvenreiche Abenteuer bildeten die Grenze.

### **NEW QUESTION: 1**

Which of the following stream ciphers is both a block cipher and a product cipher?

- A. RC2
- B. AES
- C. DES
- D. RC4

**Answer: C**

Explanation:

The Data Encryption Standard (DES) is the most widely used encryption standard. The algorithm itself is referred to as Data Encryption Algorithm (DEA). It uses a 56-bit key to encrypt or decrypt data in 64-bit blocks. DES is both a block cipher and a product cipher. Answer option D is incorrect. RC4 is a stream cipher designed by Ron Rivest. It is used in many applications, including Transport Layer Security (TLS), Wired Equivalent Privacy (WEP), Wi-Fi Protected Access (WPA), etc. RC4 is fast and simple. However, it has weaknesses that argue against its use in new systems. It is especially vulnerable when the beginning of the output keystream is not discarded, nonrandom or related keys are used, or a single keystream is used twice. Some ways of using RC4 can lead to very insecure cryptosystems such as WEP. It uses block cipher. Answer option A is incorrect. RC2 is a block cipher designed by Ron Rivest in 1987 and other ciphers designed by Rivest include RC4, RC5, and RC6. RC2 is a 64-bit block cipher with a variable size key. Its 18 rounds are arranged as a source-heavy Feistel network, with 16 rounds of one type punctuated by two rounds of another type. Answer option B is incorrect. The Advanced Encryption Standard (AES) is an encryption standard adopted by the U.S. government. The standard comprises three block ciphers, AES-128, AES-192, and AES-256. Each AES cipher has a 128-bit block size, with key sizes of 128, 192, and 256 bits, respectively. The AES ciphers have been analyzed extensively and are now used worldwide, as was the case with its predecessor, the Data Encryption Standard (DES). AES was announced by National Institute of Standards and Technology (NIST) as U.S. FIPS PUB 197 (FIPS 197) on November 26, 2001 after a 5-year standardization process in which fifteen competing designs were presented and evaluated before Rijndael was selected as the most suitable. It became effective as a standard on May 26, 2002. As of 2009, AES is one of the most popular algorithms used in symmetric key cryptography. It is available in many different encryption packages. AES is the first publicly accessible and open cipher approved by the NSA for top secret information.

## NEW QUESTION: 2

You need to recommend a solution to resolve the issue faced by the developers. What should you include in the recommendation?

- A. From the registry, set the Notify Only value to True.
- B. From the registry, set the Manual Execution Requested value to 1.
- C. From Configuration Manager, modify the Computer Agent client settings.
- D. From Configuration Manager, modify the Client Policy client settings.

**Answer: C**

Explanation:

Topic 4, Fabrikam, Inc.

Case Study

Overview

Fabrikam, Inc. is a real estate company that has 2,000 employees. Fabrikam has a main office and a branch office. The main office is located in New York City. The branch office is located in Miami.

Existing Environment

Active Directory Environment

The network contains one Active Directory forest named fabrikam.com. The forest contains a single domain. An Active Directory site named Site1 exists for the office in New York City. An Active Directory site named Site2 exists for the office in Miami. Site1 contains two domain controllers. Site2 contains one domain controller. Both sites connect to each other by using a low-latency, high-bandwidth WAN link. All servers in the domain run Windows Server 2012 R2. Site1 contains 1,500 client computers. Site2 contains 300 client computers. Two hundred users work from home. The computer of each home user is not a member of Active Directory.

Current Network and Computer Environment

Remote Desktop Services (RDS) is deployed to Site1. RDS role services are installed on four servers. The servers are configured as shown in the following table.

An application named App1 is published as a RemoteApp program.

Version 1.2 of an application named App2.exe is deployed to all of the client computers in Site1. Version 2.0 of App2.exe is deployed to all of the client computers in Site2.

The client computers deployed to Site1 during the current month have a value of Value1=True in the registry. Computers deployed before the current month do not have the Value1=True registry value.

Microsoft System Center 2012 R2 Configuration Manager is used to manage the client computers in Site1. Windows Intune is used to manage the client computers in Site2 and the client computers of the users who work from home.

The relevant client computers in Site1 are configured as shown in the following table.

The relevant client computers in Site2 are configured as shown in the following table.

Configuration Manager Environment

Configuration Manager has the collections configured as shown in the following table.

Configuration Manager has the client settings configured as shown in the following table.

The Configuration Manager collections have the maintenance windows configured as shown in the following table.

Configuration Manager has the software metering rules configured as shown in the following table.

Configuration Manager has the antimalware policies configured as shown in the following

table.

Configuration Manager has the VPN profiles defined as shown in the following table.

Both VPN profiles are provisioned for all supported platforms.

Configuration Manager has a baseline named Baseline1. Baseline1 validates whether RemoteDesktop is enabled. Baseline1 is deployed to Collection1.

Windows Intune Configuration

Windows Intune has a group named Group1. ComputerA and ComputerB are members of Group1.

A 32-bit update for Windows 8.1 named CustomUpdate1 is added to Windows Intune.

Configuration Manager and Windows Intune are not integrated.

Problem Statements

Fabrikam identifies the following issues on the network:

RDS users report that when they access the RD Web Access website, they receive the following security warning message: "The security certificate presented by this website was not issued by a trusted certificate authority."

The RDS users do not see App1 on the RD Web Access website. They can see other publishedRemoteApp programs.

Value1=True is not present on some of the client computers in Site1.

Requirements Business Goals

Fabrikam plans to implement a single solution to manage all the client computers and devices. As much as possible, Fabrikam plans to minimize the costs associated with purchasing hardware and software.

Planned Changes

Fabrikam plans to implement the following changes to the network:

For Site2, purchase the mobile devices configured as shown in the following table.

Start using Windows Intune for mobile device management.

Approve CustomUpdate1 for Group1.

Technical Requirements

Fabrikam identifies the following technical requirements:

Minimize administrative effort, whenever possible.

Manage the purchased mobile devices in Site2 by using Windows Intune.

Ensure that Baseline1 only assesses Windows 8.1 computers in the targeted collections.

For Computer3, limit the CPU usage of antimalware software up to 60 percent during antimalware scans.

Publish RemoteApp and Desktop Connection programs to the Start screen of each RDS user's client computer.

Create a collection named Collection6, which contains the client computers in Site1 that do not have the Value1=True registry value.

Application Requirements

Fabrikam identifies the following application requirements:

Publish App3 as a RemoteApp program.

Show App1 on the RD Web Access website.

Deploy a Windows Phone app named App4 to Windows Phone 8.1 users by using Windows Intune.

### **NEW QUESTION: 3**

You have the following design requirement: You need to track customer status For a sales planning application. Valid options for customer status include: Active, Inactive, Out of

Business. Customer status can change on a month-by-month basis.  
What is the best way to build Customer Status into the Planning application?

- A. Attribute dimension
- B. Free Form Text
- C. Smart List
- D. Varying attribute dimension
- E. Alternate hierarchy

**Answer: C**

Explanation:

Administrators use Smart Lists to create custom drop-down lists that users access from data form cells. When clicking into cells whose members are associated with a Smart List (as a member property), users select items from drop-down lists instead of entering data. Users cannot type in cells that contain Smart Lists. Smart Lists display in cells as down arrows that expand when users click into the cells.

Perform these tasks to create and administer Smart Lists:

- \*Define Smart Lists
- \*Associate Smart Lists with members.
- \*Select dimensions for which Smart Lists are displayed.

#### **NEW QUESTION: 4**

When adding an EMC NetWorker server's name into the /nsr/res/servers file of a client, which service must be restarted on the client for the change to take effect?

- A. nsrexecd
- B. nsrd
- C. nsrindexd
- D. nsrdb

**Answer: A**
